

David Manh Hoang

Antioch, CA | (925) 978-3355 | U.S. Citizen | Eligible to obtain a U.S. security clearance
davidmhoang99@gmail.com | [linkedin.com/in/davidmanhhoang](https://www.linkedin.com/in/davidmanhhoang) | davidmhoang.github.io

PROFESSIONAL SUMMARY

- Cybersecurity master's graduate with CompTIA CySA+, PenTest+, and ISC2 CC, with hands-on labs covering security automation, alert triage, AWS monitoring, logging, access control, vulnerability validation, and least privilege.
- Software developer with 5 years of experience supporting production web platforms, CMS migrations, workflow automation, documentation, and enterprise delivery.

CERTIFICATIONS

CompTIA CySA+, CompTIA PenTest+, ISC2 Certified in Cybersecurity (CC)

SECURITY PROJECTS

n8n Security Alert Automation and Enrichment Lab | [Part 1](#) | [Part 2](#)

- Deployed n8n in Docker with persistent storage and built a webhook-driven workflow that routed synthetic security alerts by severity and public/private source IP classification.
- Integrated VirusTotal and OpenAI APIs using stored header credentials to enrich public IPs and generate analyst-readable triage summaries.
- Validated public and private routing paths with curl, ensuring private IPs bypassed VirusTotal; documented operational considerations for API latency, usage costs, credential protection, and human-review requirements.

AWS Security Monitoring and Automation Lab | [Write-up](#)

- Provisioned a repeatable private AWS security lab with Terraform using VPC, EC2, Systems Manager, IAM, S3, KMS, route tables, and VPC endpoints.
- Implemented least-privilege access and encrypted storage using IAM and KMS policies, secure-transport requirements, service conditions, and encryption-context restrictions.
- Configured CloudTrail data events, CloudWatch metric filters, SNS alerts, and VPC Flow Logs; simulated S3 activity, tuned alert thresholds, and troubleshoot access and configuration issues.

EXPERIENCE

Robert Half — San Ramon, CA

Software Developer (Frontend Web)

September 2021 — Present

- Maintained 17 global production websites across multilingual regions, supporting availability, reliability, and enterprise campaign delivery.
- Supported AEM and Drupal CMS migration activities by validating configurations, tracking issues in Jira, resolving platform issues, and reducing operational risk.
- Automated repeatable AEM campaign workflows using platform tooling, improving team productivity by 20% and reducing manual configuration errors.
- Implemented Adobe Target personalization and analytics with privacy-aware tracking, consent considerations, and controlled data collection.

University of California, Davis — Shared Services Organization (SSO) — Davis, CA

Web Developer Intern

January 2020 — July 2021

- Maintained Drupal-based web content and developed reusable HTML, CSS, and JavaScript templates for university web pages.
- Analyzed user interaction patterns and collaborated cross-functionally to improve usability, content structure, and accessibility.

EDUCATION

Western Governors University — Master of Science in Cybersecurity and Information Assurance

Completed: December 2025

University of California, Davis — Bachelor of Science in Computer Science and Engineering

Completed: June 2021

SKILLS

Security Operations and Governance: Log analysis, alert triage, vulnerability management, incident response lifecycle, security documentation, ISO/IEC 27001 concepts, NIST SP 800-53, Risk Management Framework (RMF)

Cloud Security: AWS IAM, S3, KMS, CloudTrail, CloudWatch, VPC, Systems Manager Session Manager, encryption, least privilege, access control

Application and Web Security: OWASP Top 10, Burp Suite, secure SDLC, REST API security, vulnerability validation, authentication/authorization

Development and Automation: Python, Bash, PowerShell, Terraform, Docker, n8n, Java, C/C++, JavaScript, TypeScript, SQL, HTML/CSS, React, Node.js, Linux, Git/GitHub, OpenVAS, Kali Linux, AEM, Drupal, Adobe Target, Jira
